BODY CONTOURING

BODY CONTOURING

Emsculpt Neo Time VariesConsultation

EMSCULPT NEO is the first and only non-invasive body shaping procedure that uses radio frequency heating for fat reduction and high intensity focused electromagnetic energy (HIFEM®) for muscle strengthening and toning. The end result is more fat reduction and muscle growth than any single gold standard product.

EMSculpt Neo procedure is simple and easy. There is no preparation required for this procedure. You will lay down while the applicators are applied over the treatment area. During the treatment you may feel intense yet tolerable muscle contractions along with heating sensation which is comparable to hot stone massage. Once the procedure is completed, you can immediately get back to your daily routine. Areas that can be treated are arms, stomach, buttocks or calves.
